

### Web Content

#### Leveraging the web to grow your ministry...

Arena has a built-in Content Management System which allows the authoring of websites and sub-domains, so your websites are connected and centrally managed. You have complete control over the look and feel of your website, including fonts, images, design and colors. All can be controlled via CSS to further extend your possibilities.

You also have the ability to incorporate areas of Arena into your non-Arena hosted websites. There are two aspects to the web functionality in Arena: Forward facing and Inward facing. The Inward facing features are administrative and staff tools. The Forward facing features are created for your membership, volunteers and your extended field of influence.

#### Available Features

	Select	Premium
Classified Ads & Business Directories	No	Yes
Photo Galleries	No	Yes
Polls	No	Yes
Intranet	No	Yes
Document Manager	No	Yes
Podcsat	No	Extra

Arena allows the creation of an intranet inside the application which creates a one-stop location for your staff resources. Publish your staff directory and common forms using our Document Manager or add special pages for announcements and news.
