

Shelby Teller

Shelby Teller is a complete Check 21 compatible, electronic, check processing software that fully integrates with Shelby's product suites - ShelbyNext, Arena, HQ and v5. This unique system scans and captures images of both the front and back of checks, tithing envelopes, or other financial documents. Remotely depositing your checks saves you time and a trip to the bank!

Features and Benefits

- Adds stamped and virtual endorsements
- Creates a Check 21 compliant x9.37 cash letter or ACH file for electronic deposit
- CAR/LAR "reads" both the courtesy and legal amount of the check using OCR software technology
- Updates individual contribution records
- Creates a searchable archive of check images and payment documents
- Processes payments and posts to Accounts Receivable module
- Complies with all Check 21 regulations

Shelby Teller FAQ

1. How much does Shelby Teller cost?

Shelby Teller is priced on a tiered structure based on the number of checks processed per year. There is an annual renewal fee for subsequent years. Your sales representative can help you estimate your annual number of checks with our check calculator. Give your sales rep a call today for pricing.

2. What is included with the purchase price?

Shelby Teller software, support, training, and software installation.

3. Which scanners are compatible?

Shelby Teller works optimally with Canon scanners. While other scanners may work with Shelby Teller, we strongly recommend purchasing units from and supported by Shelby Systems. Check with your sales rep for additional information.

4. What are the file formats of the import files?

The import file is XML. The bank import file is x9.37, a banking industry standard file format.

5. What is CAR/LAR?

CAR/LAR reads handwritten Courtesy Amount (CAR and the Legal Amount (LAR) on a check, compares the two and returns the correct value with a high degree of accuracy. If this amount matches an expected amount determined by the accompanying stub, then the transaction is processed without operator intervention.

6. What fields are included in the Contributions import file?

The fields that are imported are the date, gift amount, purpose, scanned images (front and back of the checks), and accompanying envelopes.

7. Are multiple purpose codes supported in the import?

Yes.

8. Can contribution amounts be applied to existing pledges?

Yes.

9. My bank has offered us a scanner with low/minimal/no transaction fees. What does Shelby Teller offer/provide us that our bank does not?

Shelby Teller provides direct import into Shelby software. This integrated process saves you time and money and it is fully supported by Shelby Systems.

Shelby Teller Processing Summary

1. Open Shelby Teller. 
2. Scan checks and/or envelopes. 
3. Verify amounts & exceptions. 
4. Export Check 21 file send to bank. 
5. Create XML file for Shelby.
